What this module is

Implementation module in verae-zapier-middleware. The tables below are extracted from the source (signatures + JSDoc).

Exports

createWebhook, deleteWebhook, getActiveWebhooks, listWebhooksForTenant

Types / interfaces / classes

None extracted.

Functions

· Name · Parameters · Param types (JSDoc) · Returns · Calls (same file / helpers) ·

· ----- · ----- · ----- · ----- · ----- ·

· createWebhook · { tenantId, targetUrl, event } · params: object, params.tenantId: string, params.targetUrl: string, params.event: string · Webhook · see Call graph ·

· deleteWebhook · { tenantId, hookId, targetUrl } · params: object, params.tenantId: string, params.hookId: string, params.targetUrl: string · boolean — True if at least one webhook was removed. · see Call graph ·

· getActiveWebhooks · tenantId, event · tenantId: string, event: string · Webhook[] · see Call graph ·

· listWebhooksForTenant · tenantId · tenantId: string · Webhook[] · see Call graph ·

Methods (class / object)

· Name · Parameters ·

· ----- · ----- ·

· persist · (none) ·

What it imports / requires

- node:crypto
- ./db.js
- ../debug/logger.js

Call graph (identifiers invoked)

createDebugger, createWebhook, randomUUID, toISOString, getStore, push, persist, info, deleteWebhook, filter, getActiveWebhooks, listWebhooksForTenant

Each identifier is a call site in this file. Follow the import list to see the defining module; open that module's MD for parameter and return types.

Return values (how to read this)

- HTTP route handlers return Express res.json(...) bodies (see route docs).
- Zapier perform functions return a **single object** (creates) or an **array** (triggers/searches).
- Pricing functions return integer **cents** on Quote.totalCents.
