What this module is

Implementation module in verae-zapier-middleware. The tables below are extracted from the source (signatures + JSDoc).

Exports

AppError, asyncHandler, sendError

Types / interfaces / classes

· Kind · Name ·

· ----- · ----- ·

· class · AppError ·

Functions

· Name · Parameters · Param types (JSDoc) · Returns · Calls (same file / helpers) ·

· ----- · ----- · ----- · ----- · ----- ·

· asyncHandler · fn · fn: (req: import('express').Request, res: import('express').Response, next: import('express').NextFunction) => Promise<unknown> · import('express').RequestHandler · see Call graph ·

· sendError · res, err · res: import('express').Response, err: Error · AppError · void · see Call graph ·

Methods (class / object)

· Name · Parameters ·

· ----- · ----- ·

· constructor · message, { status = 500, code = 'INTERNAL_ERROR', details } = {} ·

· return · req, res, next ·

What it imports / requires

- ./debug/logger.js
- ./debug/trace-context.js

Call graph (identifiers invoked)

createDebugger, details, constructor, import, asyncHandler, resolve, fn, sendError, getTraceId, error, debug, status, json

Each identifier is a call site in this file. Follow the import list to see the defining module; open that module's MD for parameter and return types.

Return values (how to read this)

- HTTP route handlers return Express res.json(...) bodies (see route docs).
- Zapier perform functions return a **single object** (creates) or an **array** (triggers/searches).
- Pricing functions return integer **cents** on Quote.totalCents.
